

Vital Statistics Annual Report Landing Page

Before:

- ❖ The layout is achieved through a borderless table that is non-responsive.
- ❖ The editors find this layout difficult to edit, resulting in code that was riddled with broken or incorrect links and other errors.
- ❖ The layout is confusing and not well-organized or visually appealing.

After:

- ❖ I created a new site structure that uses Bootstrap accordions to hold links to the report data.
- ❖ Visitors to the page no longer have to click through multiple pages to find the data they need, and we were able to consolidate years worth of reports onto one page.
- ❖ Reports will now be added via a data entry tool on the site's back end. Although the report links must still be entered in a content window, this limits the chance for mistakes and makes the main page less error prone.
